

Transform Copilot

Powered by TechnoMile ElevateAI Service

Drastically Streamline Intake of Contract Awards and Modifications

TechnoMile's suite of Contracts solutions are purpose-built to help companies address the complex requirements of doing business with the government by streamlining and de-risking the federal contract lifecycle. With TechnoMile's Transform Copilot, companies can digitize federal prime or subcontract awards as well as modifications and our pre-trained models intelligently extract industry-specific data and present it for the Contracts team to review, automating the creation of detailed contract records in TechnoMile CLM and fast-tracking mod execution. This shaves hours off contract and mod intake activities and frees up your contracts professionals to focus on higher-value activities.

The Industry's Most Accurate, Trustworthy Results

Transform Copilot is powered by TechnoMile ElevateAI Service. ElevateAI Service infuses our TechnoMile platform with the power of generative AI and best-in-class Large Language Models, underpinned by domain-trained technologies. This frees contractors from the limitations of legacy solutions that rely on highly structured data. And, because TechnoMile is the only CLM vendor that trains its AI/ML models using industry-specific forms, subcontracts, and purchase orders, as well as leverages industry-specific prompts, our AI-powered solutions deliver the most accurate, trustworthy outputs for GovCon and Aerospace and Defense companies. Built on leading Microsoft Azure technology, all ElevateAI Service components are hosted in a GCC High environment, supporting clients' compliance with stringent data security requirements.

Flexible, Effortless Contract & Mod Digitization

Transform Copilot machine-reads any type of prime contract award form, federal subcontracts and purchase orders, as well as SF 30 modification forms and presents the extracted data for your contracts professionals to review.

Friendly, Efficient Data Validation

The copilot efficiently guides your contracts professionals through review of machine-extracted contract or mod details using an intuitive, side-by-side view that identifies exactly where each data point was extracted from the original document. This process streamlines validation and refinement of contract/mod data, saving your team time and ensuring accuracy.

Intelligent Clause Comparison

For new contract awards, the copilot intelligently compares all extracted clauses against your CLM's clause library, highlighting the percentage of each clause's content that matches your library, which allows contracts professionals to easily identify and prioritize clauses that require review. Your team can then quickly assess any discrepancies and designate the correct clause version to use when creating the new contract record. This enables efficient comparison of changes to clause language and allows contracts professionals to proactively identify changes in terms that could heighten your company's business risk. Any clauses that are unmatched or partially matched with your clause library can be captured separately for further review by your legal team.

Transform Copilot

Automated Contract Creation

For new awards, once data validation is complete, Transform Copilot automatically creates a detailed new contract record in TechnoMile CLM, complete with all CLINs/SLINs and clauses. This eliminates hours of manual data entry associated with each new award, improves your data's integrity, and allows your team to focus on managing risk and compliance, rather than administrative tasks.

Smart Summaries for Rapid Mod Approval & Execution

When a modification is ingested, Transform Copilot generates a highly digestible, AI-powered summary that explains all contract changes included in the mod, highlighting any updates to the period of performance, CLINs/SLINs, clauses, other contract details (e.g., a change to the CO/COR, wage determinations, etc.), or risk factors (e.g., a scope change). This provides instant insight into any new risk introduced by the mod and makes it straightforward to understand what changes must be made to the contract record, communicate these changes for approval (if required), and then rapidly execute the contract updates, saving the contract manager significant time.

Rapid Contract Record Updates

Companies that use TechnoMile's integrated Growth Suite to manage their pursuit of contracts can convert a Closed-Won opportunity to create a baseline contract record. Then, upon receipt of the contract award document, Transform Copilot can be used to rapidly update the baseline contract record with the latest information. Contract details – including CLINs/SLINs, ACRNs, and clauses – can be extracted and presented for review, speeding the creation of a comprehensive new contract record.

About TechnoMile

From go-to-market to contract closeout, TechnoMile provides transformative, AI-enabled cloud solutions that empower companies to find, pursue, win, and retain more business with the government. With our best-in-class cloud platform, companies optimize BD and capture processes, gain unique competitive insights, source contact intelligence, automate and de-risk the contract lifecycle, and gain an information advantage that elevates enterprise performance.
